# NORTH HIGHLAND®

# STRATEGY EXECUTION

Powerful portfolio management capabilities that help maximize business performance.
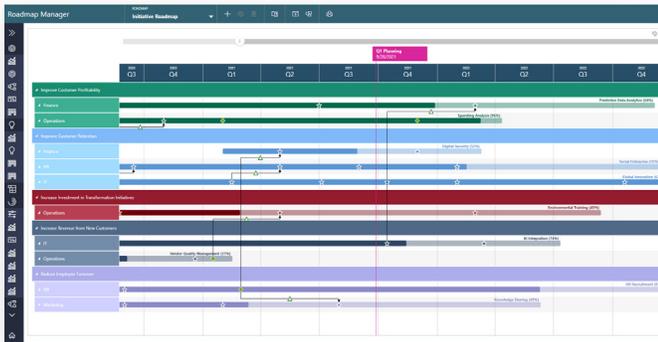

## NH360° Portfolio Insights

Ensure all initiatives, spend and resources are derived from—and continuously align with—strategic priorities.

360 Portfolio Insights delivers capabilities specifically designed for those focused on orchestration and delivery, helping them ensure that all initiatives, spend and resources are derived from—and continuously align with—strategic priorities.

# Key Features

Delivering the strategic planning, investment governance and portfolio execution controls that most organizations are missing and need to effectively orchestrate all investments to maximize business performance.

## Standardize Demand & Innovation Management

Powerful demand management tools help bring order to the chaos of PPM. Quickly and easily generate standardized business cases that align demand with strategy and help ensure that you're not simply choosing the best from a bad list of ideas.

## Dynamically Manage Financials

The financial planning and performance of projects and programs is a blind spot for most organizations. Powerful enterprise investment management software helps you manage the financial performance of all work across the portfolio.

## Resource Capacity Planning

Resource planning tools help you identify capability gaps by enabling you to standardize, consolidate and manage all aspects of resource and capacity planning, even for organizations needing to manage a portfolio of resources across a variety of project management and execution methodologies and tools.

## Benefits & Outcome Management

Interactive benefit realization tools help you track objectives across the lifetime of all initiatives to gain a clearer understanding of progress and gauge the probability of success. Portfolio-level roadmaps enable anyone to see initiatives grouped by the strategy that they impact, and powerful dashboards deliver valuable insight into all relevant data for every stakeholder.
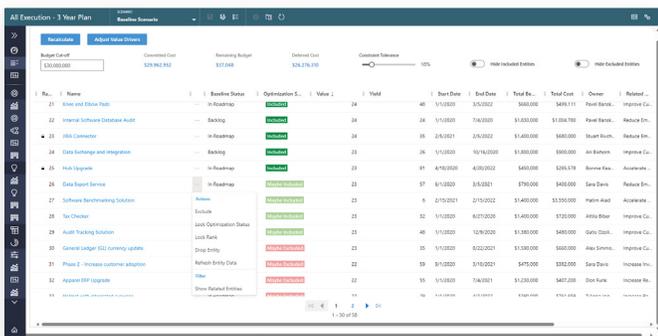

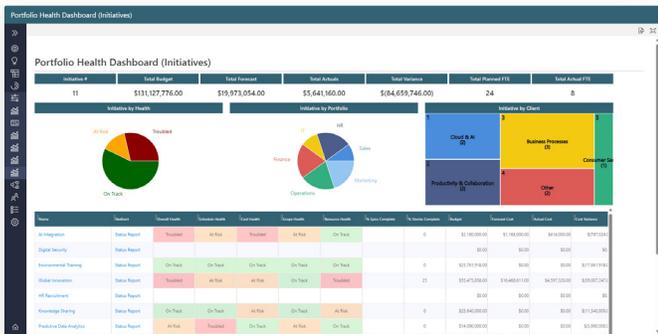

## Roadmapping & Release Management

Roadmapping tools help you visualize and communicate the performance of both your near-term and multi-year strategic plans with beautiful, interactive roadmaps. NH360 makes it easy for executives, portfolio managers, E/PMOs, product managers, or anyone in-between to quickly and easily create and maintain roadmaps.

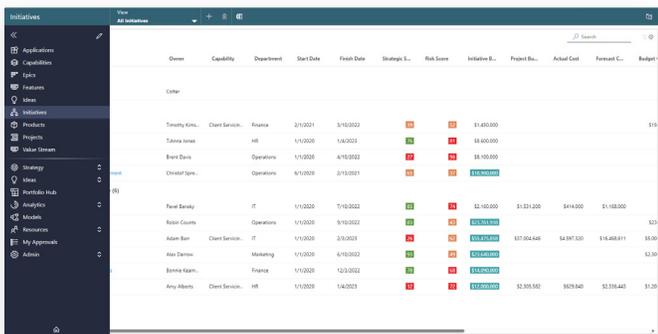

## Dynamic Analysis/What-If Scenario Modeling

Conduct what-if scenarios—in just a fraction of the time—to show the impact of any proposed change to your project and program portfolios across costs, resources, benefits, value, timeline and more. Quickly and easily respond to any possible question about your portfolio, proactively triage today's problems or even model and predict possible future problems.

## Track Performance at Any Level

It is critical to measure the performance of all strategic initiatives at every level. NH360 enables the organization to establish and track the progress of strategic objectives with performance management tools that track progress across the portfolio.

## Governance

NH360 enables organizations to build a flexible, scalable portfolio model and apply the right level of governance across the portfolio. This helps the organization apply both the top-down and bottom-up controls to ensure that all strategic initiatives are aligned with strategic objectives.

NH℠

## Integrated Ecosystem

NH360 portfolio management solutions tightly integrate with a wide variety of work management ERP, and other critical systems within your enterprise. From the execution solutions used by project managers to the decision-making tools used by executive teams, NH360 ensures that data between portfolios and key line-of-business processes and systems of record are seamlessly integrated.

## Adaptive Program Management

Create and manage investment entities independent of— but completely integrated with—the underlying execution, to provide a natural bridge between strategy and the execution. This is essential to govern across multiple execution methodologies, and enables the organization to orchestrate across all entities within the portfolio and visualize the interdependencies of all initiatives.
